In the humanized light chain, amino acids L45, L58 and L69 in the humanized light chain, amino acids L45, L58 and L69 in the human kappa LC VR framework are replaced by the amino acid present in the equivalent position of the mouse by the amino acid present in the equivalent position of the mouse 21.6 Ig L chain. Plasmids encoding the chimeric antibodies are transfected into COS cells. The humanized antibodies can be used for inhibiting adhesion of a leukocyte to an endothelial cell and for inhibiting inflammatory diseases such as multiple sclerosis. They can also be used in the treatment of stroke, correbral traumas, meningitis or encephalitis. The antibodies can also be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence encodes the mouse antibody 21.6 heavy chain variable region, Ha, directed against leukocyte adhesion molecule VLA-4. Cloned region, Ha, directed against leukocyte adhesion molecule VLA-4. Cloned cDNA sequences of mouse 21.6 VL and VH (AAQ99889 and AAQ99892) regions cDNA sequences of mouse 21.6 vL and VH (AAQ99889 and AAQ99895-99) and the mouse cDNAs are antibody against VLA-4. The 5' and 3' ends of the mouse cDNAs are modified using PCR primers (See AAQ99895-99) and then subcloned into mammalian cell expression vectors containing human kappa or gamma-1 mammalian cell expression vectors containing human kappa or gamma-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     detecting VLA-4, for affinity purification or for generating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

CC chain variable region against leukocyte adhesion molecule VLA-4.

CC cloned cDNA sequences of mouse 21.6 VH (AAQ99892) and VL (AAQ9889)

CC regions are linked to human constant regions in the construction

CC regions are modified using PCR primers (AAQ99892-98) and then

CC mouse cDNAs are modified using PCR primers (AAQ99895-98) and then

CC subcloned into mammalian cell expression vectors containing human

CC kappa or gamma-1 constant regions. In the humanized heavy chain,

CC amino acids H27, H28, H39, H30, H44 and H71 in the human HC VR

CC gensition of the mouse 21.6 Ig H Chain. Plasmids encoding the

CC chimeric antibodies are transfected into COS cells. The humanized

CC chimeric antibodies are transfected into COS cells. The humanized

CC antibodies can be used to inhibit adhesion of a leukocyte to an

CC endothelial cell and to treat inflammatory diseases such as multiple

CC clerosis. They can also be used in the treatment of stroke,

CC calso be used for detecting VLA-4, for affinity purification or for

CC also be used for detecting VLA-4, for affinity purification or for

CC generating anti-idiotype antibodies.

CC This polypeptide, designated Ha, comprises the heavy chain variable CC region (VH) of a humanised alpha-4 integrin antibody 21.6 (see also CC AAM22413). It is composed of complementarity determining regions from CC antibody 21.6 and a modified human 21/28 CL framework. It can be CC expressed in mammalian host cells following PCR amplification and CC expressed in mammalian host cells following PCR amplification and CC mutagenesis of appropriate mouse and human DNA sequences. The CC mutagenesis of appropriate mouse and human DNA sequences. The CC manufacture of a medicanent for treating asthma, atherosclerosis, CC manufacture of a medicanent for treating asthma, atherosclerosis, CC arthritis, transplant rejection, graft versus host disease, tumour CC antibody has a half-life in the human circulation essentially cc antibody has a half-life in the human circulation essentially antibody has a half-life in the human circulation essentially cc

The sequence represents the mouse anti-VLA-4 antibody 21.6 heavy chain curiable region (without signal sequence). Cloned cDNA CDR sequences of constant framework regions of the REI antibody for the light chain and constant framework regions of the REI antibody for the light chain and constant framework regions of the REI antibody for the light chain and condified using PCR primers (see AAQ9895-98) and then subcloned into combination cell expression vectors containing human kappa or gamma-1 constant regions. In the humanized light chain, amino acids L45, L49, constant regions. In the humanized light chain, amino acids L45, L49, constant regions. In the humanized light chain, amino acids L45, L49, constant regions. In the humanized light chain, amino acids L45, L49, constant regions. In the humanized light chain, amino acids L45, L49, constant regions. In the humanized light chain, amino acids L45, L49, constant leaves and L69 in the humanized and toward are replaced by the amino constant present in the equivalent position of the mouse 21.6 Ig light cells and L69 in the humanized antibodies are transfected into COS chain. Plasmids encoding the chimeric antibodies are transfected into COS cells. The humanized antibodies can be used to inhibit adhesion of a cultiple sclerosis. They can also be used in the treatment of stroke, carebral traumas, meningitis or encephalitis. The antibodies can also be used for detecting VLA-4, for affinity purification or for generating constant purification or for generating constant purification or for generating vLA-4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Key

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Inked to human constant regions in the construction of a humanized antibody against VLA-4. The 5' and 3' ends of the mouse cDNAs are modified using PCR primers (See AAQ99965-98) and then subcloned into Constant regions. In the humanized heavy chain, amino acids H27, CC by the amino acid present in the human RC VR framework are replaced CC 21.6 Ig H chain. Plasmids encoding the chimeric antibodies are CC transfected into COS cells. The humanized antibodies can be used CC to inhibit adhesion of a leukocyte to an endothelial cell and CC can also be used in the treatment of stroke, cerebral traumas, CC detecting VLA-4, for affinity purification or for generating

Complementarity determining regions (CDRs) of the 21.6 VH can be cincorporated into a human 21/28 CL framework to produce a claimed CC humanised 21.6 VH (see AAW22413) and a claimed humanised 21.6 CC creating a disease selected from asthma, atherosclerosis, AIDS, CC treating a disease selected from asthma, atherosclerosis, AIDS, CC dementia, diabetes, inflammatory bowel disease, rhemmatoid cerhititis, transplant rejection, graft versus host disease, tumour CC eritaria, and acute leukocyte mediated lung injury. The antibody CC ischaemia, and acute leukocyte mediated lung injury. The antibody CC may also be used in the affinity purification of alpha-4 integrin CC for use as a vaccine or an immunogen. It is also useful for generating idiotypic antibodies. The humanised antibodies of the convention have a half-life in the human circulation essentially CC equivalent to that of naturally occurring human antibodies.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A novel humanised Ab (hAb) binds the antigen bound by NR-LU-13. The hAb, specifically NRX451, or its conjugates can be used for the manufacture of a diagnostic or medicament for cancer diagnosis or treatment. The hAb has reduced immunogenicity and toxicity in humans, but retains the ability to bind the NR-LU-13 antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Humanised antibody binds same human cancer antigen as antibody NR-LU-13 - useful for pre-targeting methods, conventional antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 1998-042124/04.

Alternatively, the vector construct comprises a first nucleic acid, operatively linked to a promoter, encoding a polypeptide to be fused with streptavidin, and a cloning site for insertion of a second nucleic acid encoding at least 129 amino acids of streptavidin or its functional variant. The fusion proteins are useful for targeting tumour cells, particularly tumour cells associated with cancer, e.g. adenocarcinomas or hematological malignancies. The vector construct is useful for expressing of streptavidin fusion proteins in particular, these are useful as tools for medical diagnostics and therapeutic purposes, e.g. for detecting the presence or absence of, or treating, a target site within a mammalian heat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A fusion of single chain antibody/streptavidin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence encodes a fusion of the single chain antibody huNR-LU-10 and streptavidin. The antibody binds the antigen EGP40 or EPCAM. The fusion protein is expressed using vectors of the invention. The specification describes vector constructs for expressing streptavidin fusion proteins. The vector comprises a first nucleic acid encoding streptavidin or its functional variant operatively linked to a promoter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New vector constructs for expressing genomic streptavidin fusion proteins which are useful for targeting tumour cells associated with cancer, e.g. adenocarcinomas \dot{\cdot}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Goshorn SC,

                                                                                                                                                                  human/murine light and heavy chain DNA mols. A recombinant vector for the expression of the heavy and light chain DNA mols. was prepd., and used to transform a host cell. The host cell was then cultured, and the expression prods. of the heavy and light chain DNA mols. sepd. and connected with a peptide linker to produce a single stranded FV region. The reshaped FV region has low human antigenicity, and is therefore expected to be useful as an agent for the diagnosis and treatment of cerebral tumours,
                                                                                                                                                                                                                                                                                                                                                                                                                               monoclonal antibody (MAb) ONS-M21. The MAb was prepd. by combining light and heavy variable region DNA, from a murine anti-human myeloblastoma cell MAb, with human light and heavy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ş
The present sequence is a scFv fragment from the chimaeric human/murine monoclonal antibody (MAb) ONS-M21. The MAb was prepd. by combining light and heavy variable region DNA, from a murine anti-human myeloblastoma cell MAb, with human light and heavy constant region sequences, respectively to produce chimaeric for the expression of the heavy and light chain DNA mols. A recombinant vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    8888888
              The sequence encodes the mouse antibody 21.6 heavy chain variable region, Hc, directed against leukocyte adhesion molecule VLA-4. Cloned cDNA sequences of mouse 21.6 VL and VH (AAQ99889 and AAQ99892) regions are linked to human constant regions in the construction of a humanized modified using PCR primers (See AAQ99895-98) and then subcloned into constant regions. In the humanized human happa or gamma-1 constant regions. In the humanized light chain, amino acids L45, humanized ligh

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAR81325 standard; Protein; 119 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            prepd., and used to transform a host cell. The host cell was then cultured, and the expression prods. of the heavy and light chain DNA mols. sepd. and connected with a peptide linker to produce a single stranded FV region. The reshaped FV region has low human antigenicity, and is therefore expected to be useful as an agent for the diagnosis and treatment of cerebral tumours,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence

Plasmids encoding the chimeric antibodies are transfected into COS cells. The humanized antibodies can be used for inhibiting adhesion of a leukocyte to an endothelial cell and for treating inflammatory diseases such as multiple sclerosis. They can also be used in the treatment of stroke, cerebral traumas, meningitis or encephalitis. The antibodies can also be used for detecting VLA-4, for affinity purification or for generating detecting VLA-4, for affinity purification or for generating

It is CC composed of complementarity determining regions (CDRs) from the VH CC region (see AAW22410) of mouse alpha-4 integrin monoclonal antibody C2 1.6 and a modified human 21/28 CL framework. It contains an CC 21.6 and a modified human 21/28 CL framework. It contains an CC 21.6 VH version Ha (see AAW22412). Humanised CC claimed humanised 21.6 VH version Ha (see AAW22412). Humanised 21.6 CC 21.6 VH and VL regions are used to produce claimed humanised 21.6 CC antibodies useful in the manufacture of a medicament for treating CC asthma, atherosclerosis, AIDS, dementia, diabetes, inflammatory CC asthma, atherosclerosis, AIDS, dementia, diabetes, inflammatory CC asthma atherosclerosis, AIDS, dementia, diabetes, useful coversus host disease, tumour metastasis, nephritis atopic compatitis, psoriasis, myocardial ischaemia, and acute leukocyte compatitis, psoriasis, myocardial ischaemia, and acute leukocyte compatitis, psoriasis, myocardial ischaemia, and acute leukocyte compatitis, psoriasis, myocardial schaemia, and acute leukocyte compatitis, psoriasis, myocardial scha
